

TfL 2013/14 Quarter 4 Performance Report

September 2014

London TravelWatch is the official body set up by Parliament to provide a voice for London's travelling public.

Our role is to:

- Speak up for transport users in discussions with policy-makers and the media,
- Consult with the transport industry, its regulators and funders on matters affecting users,
- Investigate complaints users have been unable to resolve with service providers,
- Monitor trends in service quality.

Our aim is to press in all that we do for a better travel experience for all those living, working or visiting London and its surrounding region.

Table of issue dates for London TravelWatch's Transport for London (TfL) Performance Reports

TfL financial periods	Issue dates for London TravelWatch report for the corresponding Quarter
Quarter 1 – Apr to Jun 2012	30 October 2012
Quarter 2 – Jul to Sept 2012	11 January 2013
Quarter 3 – Oct to Dec 2012	12 March 2013
Quarter 4 – Jan to Mar 2013	23 July 2013
Quarter 1 – Apr to Jun 2013	15 October 2013
Quarter 2 – Jul to Sept 2013	25 February 2014
Quarter 3 – Oct to Dec 2014	19 May 2014
Quarter 4 – Jan to Mar 2014	16 September 2014

London TravelWatch would like to acknowledge TfL's help and assistance in producing this report by supplying performance data and operational commentaries to accompany the performance statistics.

Executive summary

This report summarises the performance of all the Transport for London (TfL) modes of transport for the fourth quarter of the 2013/14 financial year (December to March 2014).

The aim of the report is to provide, in one place, end of year information about the performance of TfL's transport network from the perspective of users. For this reason, London TravelWatch has selected performance information on each of the modes that it believes reflects the experience of the user. The information has been gathered from a number of sources to provide an overview of TfL's performance (see the appendix for source references).

We have previously judged performance against TfL's business plan targets. However, in this report we have taken a wider view on the performance of the various modes, more from a consumer perspective.

We have assessed the end of year performances of the main TfL passenger modes. Overall they are delivering well against their own targets and customer satisfaction is high. However, we remain concerned about the performance of London Streets and indications of rising traffic levels, which may well lead to increased congestion in the future. This will in turn impact on bus services. TfL need to develop a substantive response to rising population and employment levels that lead to increasing traffic levels on London's roads.

London Streets

TfL are managing their network better in terms of interventions to manage planned and unplanned events, computer controlled signals and works to improve the through-flow of junctions etc. JTR was however below target this quarter and below its end of year target.

There may be an indication of a reversal in the long term trend of reducing traffic volume which, if it continues, may mean increased congestion levels and the problems this will bring in the future. There needs to be a substantive policy response to the increasing congestion on London's streets, particularly along bus routes.

Given the focus there has been on cycling and it being an integral part of the Mayor's Transport Strategy, it is pleasing to see a sharp rise in cycling this quarter and the end of year target being met.

Whilst it is noted that TfL's carriageway condition target is met, London TravelWatch would want to see improvements in this area as the condition of the carriageway affects the journey experience of all the users of London's roads.

London Buses

The reliability of London's bus services and customer satisfaction scores are again good. TfL and the boroughs continue to increase the number of fully accessible bus stops in response to London TravelWatch campaigning over the last few years. This is very welcome. TfL would have needed 77% of bus stops being accessible by the end of March 2014 in order to achieve the Mayoral target of 95% by 2016. This has not been achieved.

The growth in demand and rising levels of congestion may well impact on reliability in the future and this along with journey time need constant monitoring. We look forward to the development of a measure of journey speed using the I bus system.

It remains a concern of London TravelWatch that not enough is being done to deliver bus priority on the streets used by London's bus services. Indeed some bus priority continues to be lost to cycle, town centre and other schemes. Where such losses occur there should be complimentary improvement to bus priority elsewhere.

London Underground

Customer satisfaction scores are above target, but and Excess Journey Time is below target. This will be primarily due Industrial action in the quarter.

It is noted that the customer satisfaction train service score has improved compared to last quarter (Q3 2013/14). Satisfaction with crowding levels has also improved.

Docklands Light Railway

Performance and customer satisfactions scores are high. The overall customer satisfaction score was five points above target.

Customer complaints, (mostly about ticket machines) have increased compared to previous quarters to be about average for the DLR.

Tramlink

Performance and customer satisfaction are high. Value for money is above the last quarter and the same quarter in the previous year. Customer complaints have also declined.

London Overground

London Overground is continuing to perform well and achieved its targets, although the RTA is poorer than previous quarters. Customer complaints are down, although greater enforcement on ticketless travel has seen a rise of complaints in this area.

Crowding on some sections of the London Overground is a regular occurrence. TfL are responding to this with additional carriages in the future.

Dial-a-Ride

Dial-a-Ride's performance in terms of journeys operated was similar to the same quarter in the previous year and was on target for the end of year.

Customer satisfaction overall remains at target, but this masks the issue of dissatisfaction of users with the ad-hoc journey booking service.

Cycle hire

The latest customer satisfaction score is higher than any since the scheme started. The different elements of the survey suggest increasing satisfaction with the use of members' keys and with the service from the contact centre.

However, the availability of spaces at docking stations and value for money was at their lowest levels.

1 Travel in London

TfL's annual '*Travel in London*' report records the way Londoners travelled in 2012/13. This report was published in January 2014¹.

There were 25.9 million daily trips in, to, and from, Greater London, an increase of 1.5% over the previous year. This detailed in Table 1.

Table 1: How	Londoners	travel	(millions	of	trips	and	percentage	of a	ıll trips),
2012									

Mode	No. of trips (millions) 2011	No. of trips (millions) 2012	Percentage of total 2012	Percentage change
Rail	2.4	2.6	10	8.3
Underground/DLR	2.2	2.4	9.2	9.1
Bus/Tram	4.1	4.1	15.8	0
Taxi/PHV	0.3	0.3	1.1	0
Car (driver & passenger)	9.6	9.6	37.0	0
Motorcycle	0.2	0.2	0.7	0
Cycle	0.5	0.5	1.9	0
Walk	6.2	6.3	24.3	1.6
All modes	25.5	25.9		1.6

¹ Travel in London, Report 6, Table 2.2

2 London Streets

This section of the TfL Performance Report focuses on the performance of the Transport for London road network (TLRN) also known as the Red Routes, which are the major arterial roads operated by TfL.

Journey Time Reliability (JTR) is a new measure of the performance of the road network. Although there are over four years of data for this measure, caution is still needed in drawing conclusions about the trend of JTR on the TLRN. The JTR measure is defined as the proportion of traffic which - for a 'typical' 30-minute journey – takes less than 35 minutes (a representative average London journey time of 30 minutes plus a five-minute 'allowance').

TfL has included projections for this indicator in the 2011/12 – 2014/15 Business Plan. The target figure is 89.6% for this financial year.

JTR is a measure of the congestion impacts on journeys. A major influence will be traffic volume, which as can be seen from graph 5 below, has fallen over the last few years, but has seen an increase in recent quarters. TfL have also undertaken much activity over the past few years to improve JTR, for example altering traffic signal timing, managing events and charging the utilities etc. for some street works.

The JTR across the whole of the TLRN in the AM peak for quarter 4 was 88.8%, which was below target for this quarter. This is 0.70 percentage points lower (worse) than the same period in 2012/13, and below the end of year target of 89.6%.

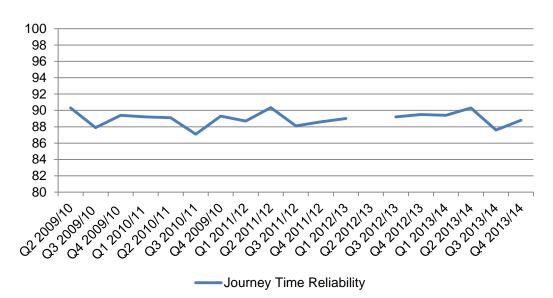

The same statistics of graph 1 are represented as a line graph in graph 1b. Please note there is no figure for the quarter 2 2012/13.

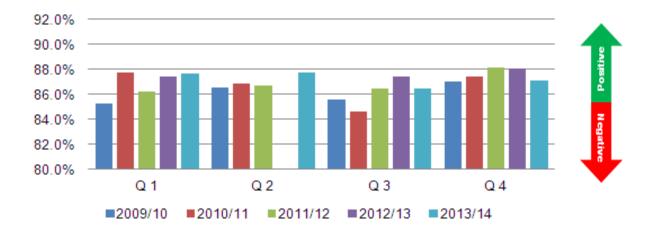

Graph 1b - Journey Time Reliability on the TLRN in the AM peak since Q1 2009/10

An equivalent JTR figure for the central area is also reported by TfL. This quarter's figure is 87.1%; this is 0.94 percentage points lower (worse) than the same period in 2012/13.

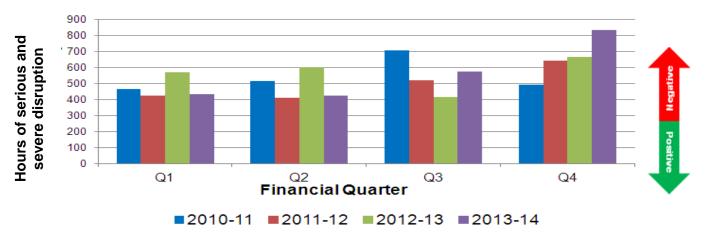

Graph 2 - Journey Time Reliability in central London in the AM peak by quarter, Q1 2009/10 to Q4 2013/14

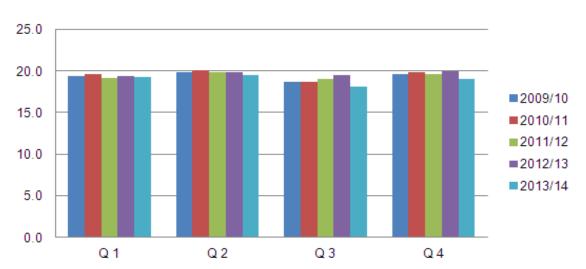

Serious and severe disruption on the TLRN rose in quarter 4 compared to the same quarter last year. The main contributors include an increase in traffic volumes and accidents.

The average traffic speed on London's major roads in quarter 4 during weekdays decreased compared with the same quarter last year.

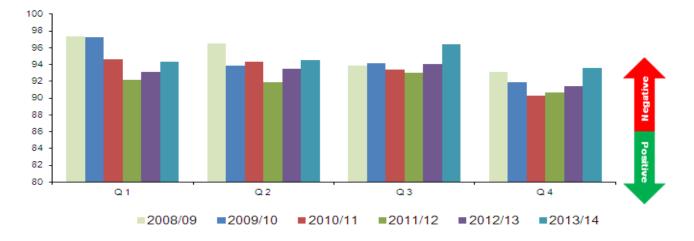

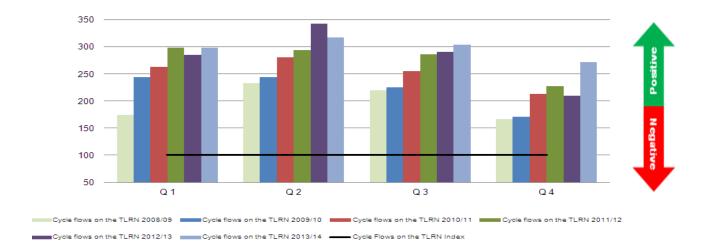

Traffic volumes across London have been generally falling. This is an increase compared to the same period last year.

Cycle flows in quarter 4 have increased quite markedly compared to the same quarter in the previous year. Minor corrections have been made to the TLRN cycling index methodology to ensure it accurately reflects recent cycle flows.

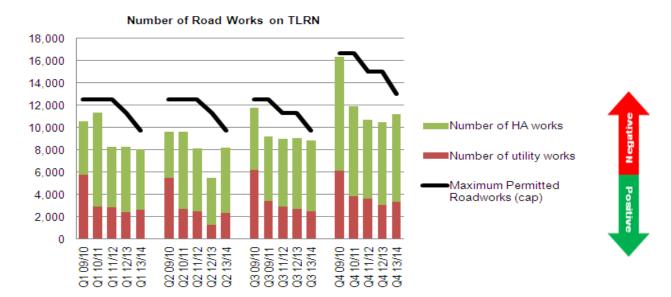

11

Graph 7 shows the number of road works on the TLRN since quarter 1 2009/10. This shows that the number of road works have been contained below TfL's target maximum.

12

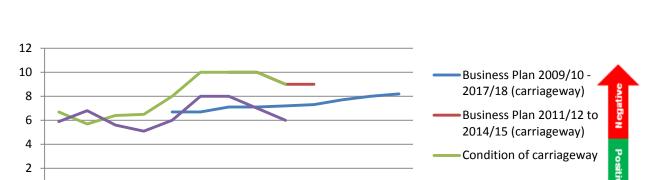

Condition of footway

The percentage of roads not in a 'good state of repair' is significantly above the target (poorer) than a previous business plan target. This target has been relaxed in the latest business plan, and is now being met. TfL tell us, this is a sustainable target. There has been an improvement in the condition of the TLRN pavements this year.

[Note: the green and purple lines show the percentage of carriageway and pavement that is assessed as in need of repair. The blue and red lines show business plan projections.]

This is an annual survey reported at the end of the financial year.

2015/16

2013/14

2014/15

2016/17

<u>Graph 8 – Condition of the TLRN carriageway and pavements since 2005/06</u> (percentage of carriageway/pavement in need of repair)

Since 2010, TfL have been conducting an online customer satisfaction survey amongst users of the TLRN. They have just repeated this survey in 2013. Below is a selection of the results.

2011/12

2012/13

Indicator	2010	2011	2012	2013
Overall satisfaction	72	75	76	75
Street lighting	75	77	77	76
Condition of road surfaces	68	70	73	71

Table 4 shows a summary of all of the 2013/14 TfL business plan targets for streets that do not relate to safety.

Table 4 – Q4 2013/14 London Streets TfL business plan key performance Indicator (KPI)

КРІ	Q4 Target 2013/14	Current performance level
Journey Time Reliability (seasonal target)	89.2	88.8
TLRN cycling journeys (seasonal target)	239	272
% of road assets not in good repair (annual figure for 2009/2010)	10%*	9%
Traffic signal availability	99.1%	99.3%
Street lights operating	97%	98.5%

*Target reduced to reflect deterioration in road condition and an acceptance that the previous target is unachievable.

London TravelWatch's overall performance assessment of TfL Streets:

TfL are managing their network better in terms of interventions to manage planned and unplanned events, computer controlled signals and works to improve the through-flow of junctions etc. JTR was however below target this quarter and below its end of year target.

There may be an indication of a reversal in the long term trend of reducing traffic volume which, if it continues, may mean increased congestion levels and the problems this will bring in the future. There needs to be a substantive policy response to the increasing congestion on London's streets, particularly along bus routes.

Given the focus there has been on cycling and it being an integral part of the Mayor's Transport Strategy, it is pleasing to see a sharp rise in cycling this quarter and the end of year target being met.

Whilst it is noted that TfL's carriageway condition target is met, London TravelWatch would want to see improvements in this area as the condition of the carriageway affects the journey experience of all the users of London's roads.

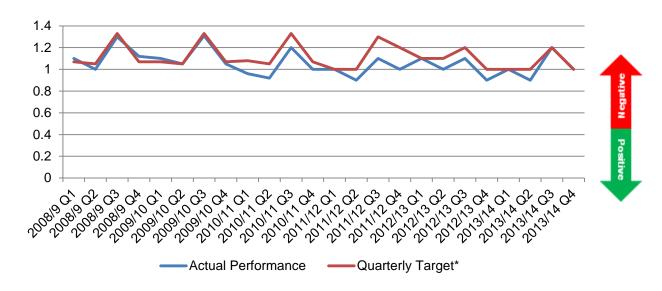

3 London Buses

This section of the report outlines the performance of the London bus network in the third quarter of 2013/14.

Overall bus network performance

For the overall bus network, the two most significant measures of bus performance, which reflect passengers' experience, are Excess Wait Time (EWT), and the percentage of scheduled kilometres operated. Between them, they show whether the planned frequency of bus services are being achieved.

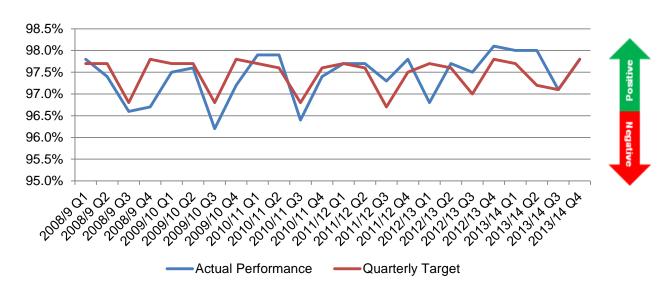

EWT is the measure that indicates the additional minutes wait time for passengers beyond the scheduled value on high frequency bus routes. EWT was 1.0, which was in line with the target for this quarter and for the end of year target. See Graph 9.

Graph 10 represents the historical trend of the percentage of scheduled bus kilometres operated. This measure of performance is on target this quarter. Again, the graph shows seasonal targets.

Graph 10 – Q1 2008/09- Q4 2013/14, Percentage of scheduled bus kilometres operated

Focus on poor performing routes

As well as the EWT figure for all of London's high frequency bus services, TfL publishes figures for each route along with the minimum standard agreed with the operator as part of the contract.

Of London's 378 high frequency bus routes in quarter 4 2013/14, 45 were below the contracted minimum standard, 31 operated at the contracted standard, and 302 performed better than the contracted standard.

Poor performance on the bus network is often because of prolonged road works, which are outside of the control of TfL. When poor performances occur, TfL actively tries to reduce the impact on passengers.

London TravelWatch has analysed the worst performing 24 bus services in this quarter, to see if any are consistently performing poorly routes. Of these, bus routes 275 and 129 are of concern. London TravelWatch has asked TfL what the issues are for these routes and will continue to monitor them.

TfL informed London TravelWatch that:

"Route 275 has been struggling. We have already added an extra bus and it does look as if a second extra bus is now needed and we're working with Stagecoach on this at the moment."

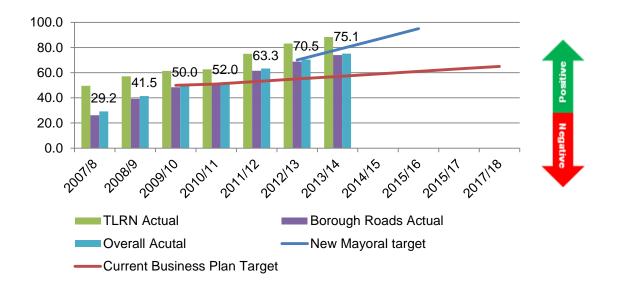

"Route 129 does not have enough running time partly owing to very high loadings, mainly to and from North Greenwich in the peaks. We've just converted the route to double deck which should resolve the capacity issue and we also plan to add extra running time in the not too distant future."

Bus stop accessibility

Based on TfL's audit of bus stops, 75.1% of all bus stops across the network meet TfL's exacting accessibility criteria. On the TfL road network, the figure is higher at 88.3%9. This is a significant improvement and above TfL's Business Plan target.

Graph 11 shows the accessibility on the TLRN and on borough roads along with targets for bus stop accessibility. The blue line represents the Mayor's new target to 2016. The red line (a lower target) is from the 2009/10 to 2017/18 Business Plan. The new target set by the Mayor is very welcome, but will be challenging to achieve in a relatively short timeframe.

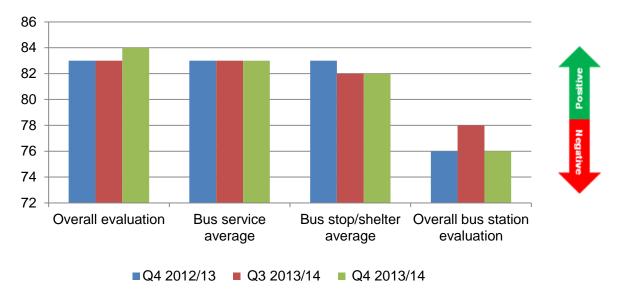

Graph 11 – Bus stop accessibility 2008/9 to 2017/18 target and progress to date

Customer Service

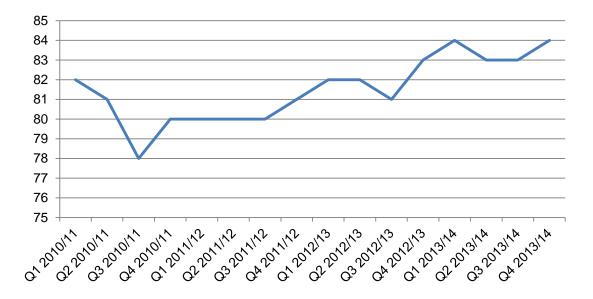

Customer satisfaction figures for the last two quarters, along with the comparison from one year ago, are shown in Graph 12.

Graph 13 shows the overall customer satisfaction scores since Q1 2010/11.

Graph 13 – Overall satisfaction since Q1 2010/11 to Q4 2013/14

TfL reports quarterly figures for the number of complaints they receive per 100,000 journeys. These are available for all modes, except streets. London Buses have

maintained a consistent level of performance, receiving only 2.47 complaints per 100,000 journeys in quarter 4.

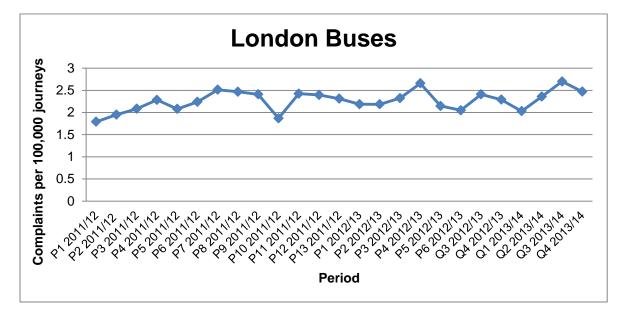

Table 5 shows a summary of the 2013/14 TfL Business Plan targets for London Buses.

Table 5 – Q4 2013/14 London Buses business plan key performance indicator (KPI)

KPI	Q4 Target 2013/14	Current performance level
Customer satisfaction – overall	82	84
Excess wait time – high frequency routes	1.0 minute	1.0 minute
% of Scheduled services operated	97.8%	97.8%

London TravelWatch's overall performance assessment of London Buses:

The reliability of London's bus services and customer satisfaction scores are again good. TfL and the boroughs continue to increase the number of fully accessible bus stops in response to London TravelWatch campaigning over the last few years. This is very welcome. TfL would have needed 77% of bus stops being accessible by the end of March 2014 in order to achieve the Mayoral target of 95% by 2016. This has not been achieved.

The growth in demand and rising levels of congestion may well impact on reliability in the future and this along with journey time need constant monitoring. We look forward to the development of a measure of journey speed using the I bus system.

It remains a concern of London TravelWatch that not enough is being done to deliver bus priority on the streets used by London's bus services. Indeed some bus priority continues to be lost to cycle, town centre and other schemes. Where such losses occur there should be complimentary improvement to bus priority elsewhere.

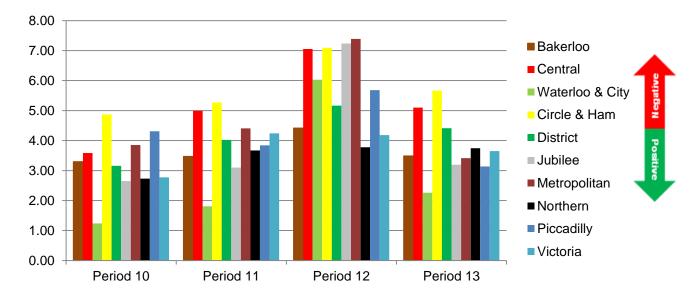

4 London Underground

In this section, the performance of London Underground for the fourth quarter of the financial year 2013/14 is presented. The key indicators focused on are those for which targets are set in the TfL business plan and those which reflect the experience of London Underground's passengers.

Excess Journey Time (EJT) measures the number of additional minutes added to a total journey because of delays. Graph 15 presents the EJT for each line on the Underground network over the last four periods making up (broadly) the quarter.

It should be noted that reliability affected by industrial action in February 2014 (period 12), which saw lost customer hours increase.

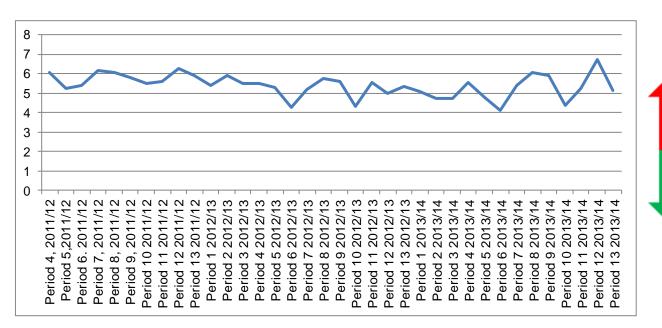

The network measure, shown in Graph 16, is a better estimate of EJT, as it is weighted by the passenger numbers using the different lines and recognises that 40% of Underground journeys will include two legs and therefore includes two wait times.

London Underground performed better than the network target set in the TfL 2013/14 business plan. It should be noted that this network target is somewhat tighter than the previous year's target and will tighten further in future years. While there are high profile disruption events on the underground, performance is on an improving trend.

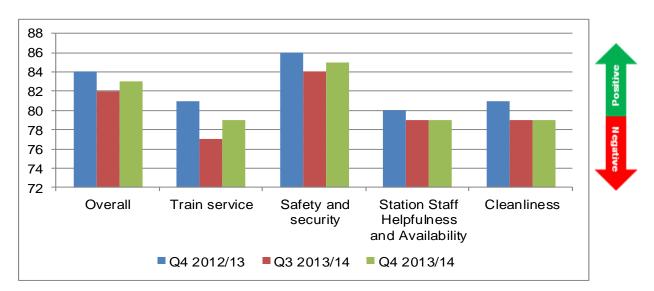

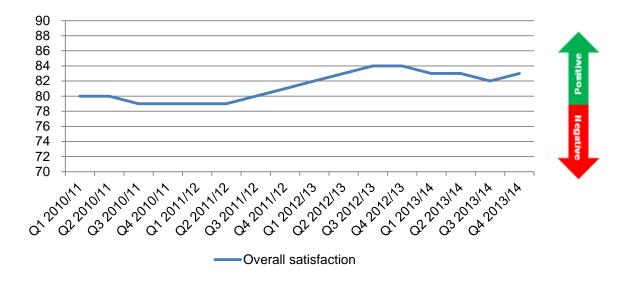

Customer satisfaction figures for the last two quarters, along with the comparison from one year ago, are shown in the Graph 17. The increase in satisfaction with 'train service' score is notable.

Graph 17 –Q4 2012/13, Q3 2013/14 and Q4 2013/14 London Underground customer satisfaction scores

Graph 18 shows the overall satisfaction score with London Underground services since Q1 2010/11.

Graph 18 – Overall satisfaction, Q1 2010/11 to Q4 2013/14

London Underground recorded an increase in complaints this quarter, receiving 1.29 complaints per 100,000 journeys, which is the same rate in quarter 4 2012/13. The increase in complaints is attributed to the February 2014 industrial action.

Graph 19 – Customer complaints received by the Underground for every 100,000 journeys

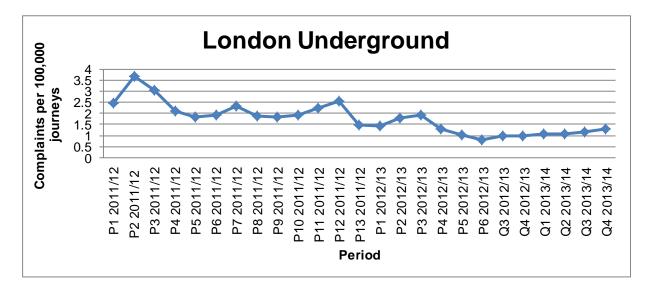

Table 6 shows a summary of all of the 2013/14 TfL business plan targets for London Underground.

Table 6 – Q4 2013/14 London Underground TfL business plan key performance indicator (KPI)

KPI	Q4 Target 2013/14	Current performance
Customer satisfaction score – overall	81	83
Excess Journey Time	5.42 minutes	5.37 minutes
% of Scheduled services operated	97.2%	96.6%

London TravelWatch's overall performance assessment of London Underground:

Customer satisfaction scores are above target, but and Excess Journey Time is below target. This will be primarily due Industrial action in the quarter.

It is noted that the customer satisfaction train service score has improved compared to last quarter (Q3 2013/14). Satisfaction with crowding levels has also improved.

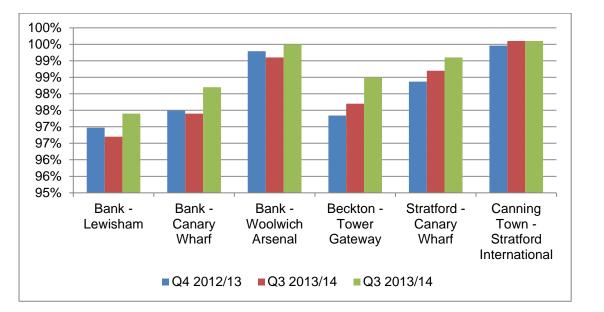

24

5 Docklands Light Railway

In this section, the performance of DLR is presented. The key indicators focused on are those for which targets are set in the TfL business plan and those which reflect the experience of passengers of the DLR.

Graph 20 shows the journey time performance by route.

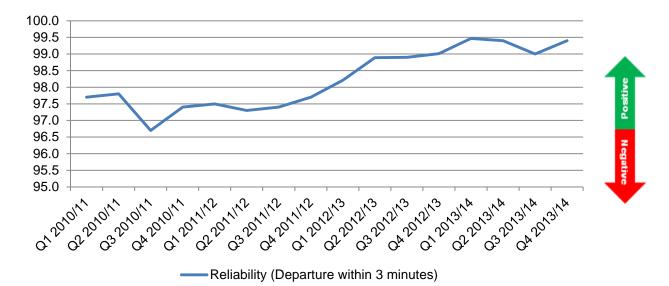

Graph 20 – Q4 2012/13, Q3 2013/14, Q4 2013/14 journey time (split by route)

*Please note DLR use calendar year quarters when they publish figures on their website. These are financial year quarters in line with TfL general reporting.

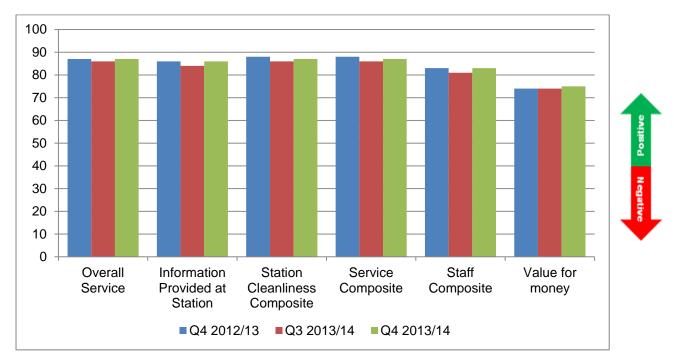

DLR's network-wide performance measure is 'departure reliability'. This is the percentage of intervals between trains at terminal stations no more than three minutes greater than the published service intervals.

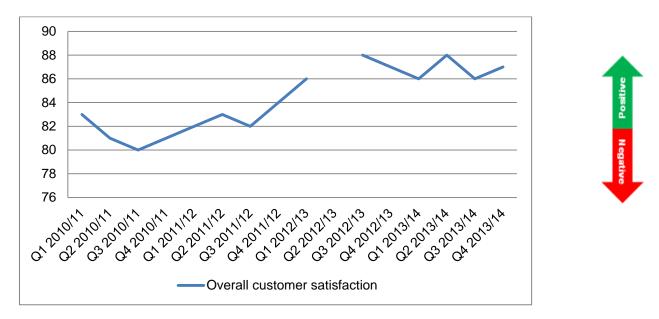

Graph 23 – Q1 2010/11 to Q4 2013/14 DLR overall customer satisfaction scores

Customer satisfaction scores were omitted in quarter 2 2012/13, due to the staging of the London Olympic Games.

Complaints maintained a similar rate compared to the same period last year (Q4 2012/13), but increased compared to the previous quarter (Q3 2013/14). 2.55 complaints were received per 100,000 journeys. Complaints were mainly about Ticket Vending Machines (TVM).

Graph 24 – Customer complaints received by TfL for every 100,000 journeys

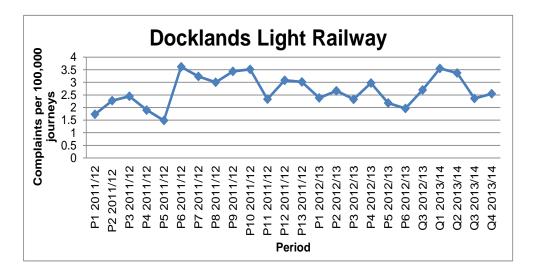

Table 7 – Q4 2013/14 DLR TfL business plan key performance Indicator (KPI)

KPI	Q4 Target 2013/14	Current performance level		
Customer satisfaction score – overall	82	87		
On-time performance	97%	99.3%		
% of Scheduled services operated	98%	99.2%		
London TravelWatch's overall performance assessment of Docklands Light Railway: Performance and customer satisfactions scores are high. The overall customer satisfaction score was five points above target.				
Customer complaints, (mostly about ticket machines) have increased compared to previous quarters to be about average for the DLR.				

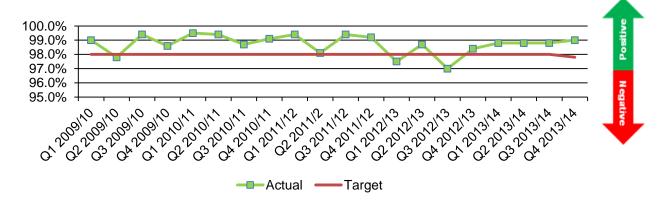

28

6 London Tramlink

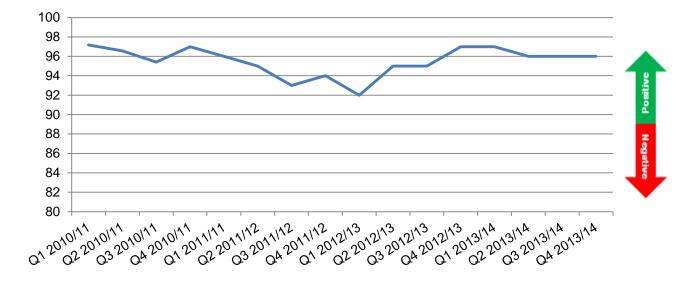

The percentage of scheduled services operated by Tramlink increased compared to previous quarter, and was above the business plan target.

Graph 25 – Q3 2008/9 to Q4 2013/14, percentage of scheduled service kms operated

London Tramlink reports a public performance measure, which is the percentage of trams that arrive within five minutes of the scheduled time. There is no associated target.

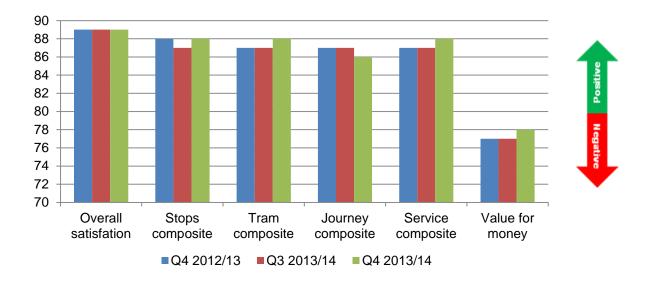

29

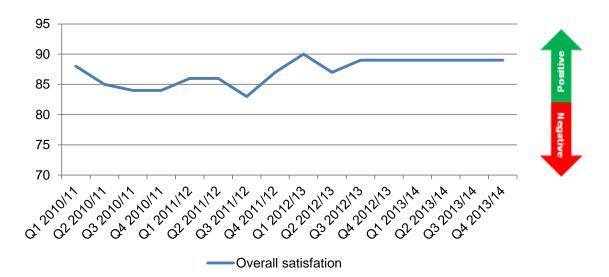

Customer satisfaction scores on Tramlink are shown in Graph 27 including a Tramlink value for money score.

Graph 27 – Q4 2012/13, Q3 2013/14, Q4 2013/14 customer satisfaction scores

Tramlink received 0.98 complaints per 100,000 journeys. From Q3 2013/14, Tramlink complaints have been recategorised. Any previous contact was classed as complaints; this is now based on genuine complaints only. Issues of complaints were centred on overcrowding and rail replacement services.

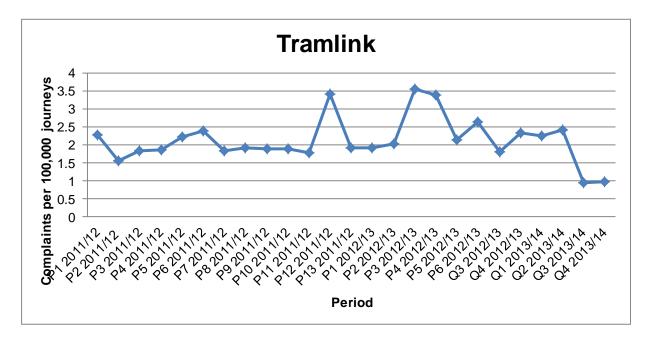

Table 8 shows a summary of all of the 2013/14 TfL Business Plan targets for London Tramlink.

Table 8 – Q4 2013/14 London Tramlink TfL business plan key performance Indicator (KPI)

КРІ	Q4 Target 2013/14	Current performance		
Customer satisfaction score – overall	86	89		
% of scheduled service kms operated	98%	99%		
London TravelWatch's overall performance assessment of London Tramlink:				
Performance and customer sati	sfaction are high. Value fo	or money is above the last		

Performance and customer satisfaction are high. Value for money is above the last quarter and the same quarter in the previous year. Customer complaints have also declined.

7 London Overground

London Overground's public performance measure (PPM) for the fourth quarter was 96.6%. This was 0.64 percentage points higher than the same quarter last year. Please note this is a Network Rail statistic.

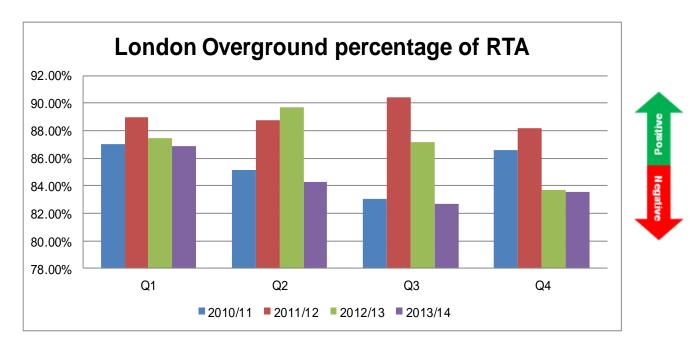

The National Rail Passenger Survey results are from the Autumn 2013 wave of surveys. Passenger satisfaction has significantly decreased since the last survey. The percentage of passengers satisfied was 89% compared with 93% in autumn 2012, and 82% in spring 2012.

TfL's own customer satisfaction score is above target.

Right time arrival

London TravelWatch members have asked that Right Time Arrival (RTA) be included in this report. RTA is an industry measure of the percentage of trains that arrive at their final destination either on time or early. Right time is defined as less than one minute late, and should not be confused with "on time", as defined for Public Performance Measure (PPM) purposes.

London Overground performs well compared to most TOCs, however this month's RTA was poor compared to previous performance.

Graph 30 – London Overground percentage of RTA

London Overground experienced an increase in complaints compared to the previous quarter but was lower than quarter 4, 2012/13, receiving 3.22 complaints per 100,000 journeys. The increase in complaints is attributed to greater enforcement on ticketless travel.

www.londontravelwatch.org.uk

Graph 31 – Customer complaints received by TfL for every 100,000 journeys

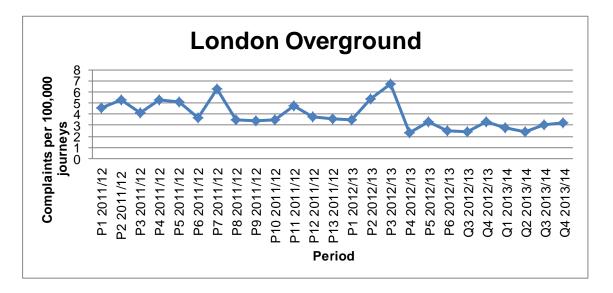

Table 9 – Q4 2013/14 London Overground TfL business plan key performanceIndicators (KPI) and National Rail performance figures

National Rail Performance measure	Target 2013/14	Current performa nce level
Customer satisfaction – overall (National Passenger Survey bi- annual data). Percentage satisfied or good	Average of similar London and South East TOC's: 81% (Not a TfL target)	89% (Autumn 2013)
Public Performance Measure (Network Rail figures)	Average of London and South east TOCs is 91% (Not a TfL target)	96.6%
TfL KPIs	Q4 Target 2013/14	Current performance level
Overall customer satisfaction score (TfL measure)	80	82
On time performance (A TfL measure of PPM Moving Annual	94.2%	96.1%
Average)		

London Overground is continuing to perform well and achieved its targets, although the RTA is poorer than previous quarters. Customer complaints are down, although

greater enforcement on ticketless travel has seen a rise of complaints in this area.

Crowding on some sections of the London Overground is a regular occurrence. TfL are responding to this with additional carriages in the future.

8 Dial-a-Ride

Dial-a-Ride is a door-to-door transport service operated by TfL for people (members) with disabilities who cannot use buses, trains or the Underground in London.

Overall customer satisfaction was above target this quarter. Dial-a-Ride members are very satisfied with driver helpfulness/courtesy, which scores 96. Satisfaction with the booking process is lower than the same time last year with a score of 79, which is below target.

The number of journeys delivered in quarter 4 is similar to the same quarter in the previous year. Though no quarterly target is available, the number of journeys was on target for the whole year.

It is pleasing to see Dial-a-Ride is now generally delivering the target number of journeys and customer satisfaction is at target. However, greater demand may arise from an aging population and the cessation of other similar door-to-door services. TfL have implemented a new regime for membership, which should ensure that those that need this service are prioritised.

Complaints increased compared to the same period last year. Dial-a-ride received 151 complaints per 100,000 journeys. Booking refusals are the main source of complaints.

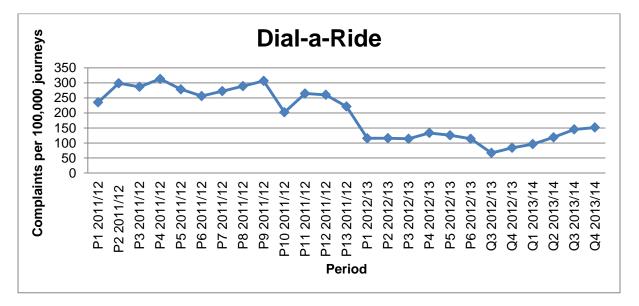

Table 10 – Q4 2013/14 Dial-a-Ride TfL business plan KPIs

КРІ	Q4 Target 2013/14	Current performance level
Customer satisfaction score – overall	92	93
Quarterly passenger journey numbers	400,000	1,400,000 annual trips
London TravelWatch's ov	erall performance assessm	ent of Dial-a-Ride:
•	e in terms of journeys opera ar and was on target for the	ated was similar to the same e end of year.
Customer satisfaction over	rall remains at target, but t	his masks the issue of

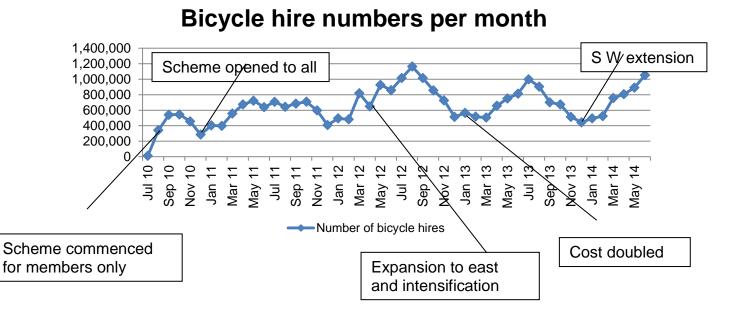

dissatisfaction of users with the ad-hoc journey booking service.

9 Cycle hire

In this section, the performance of the cycle hire scheme is presented. London's cycle hire scheme is a public bike-sharing scheme for shorter journeys around the capital. The bikes are available to casual users, as well as London cycle hire scheme members.

The graph below shows the usage of the cycle hire scheme since August 2010, on a monthly basis. The number of cycle hires has fluctuated for a number of reasons since it started. Initially cycle hire was only available to members. Since then one-off hires were made possible and the availability of cycles has been increased as the scheme has rolled out to new areas. In January 2013, there was a sharp increase in the 'access' fee. Thus trends in usage are difficult to determine

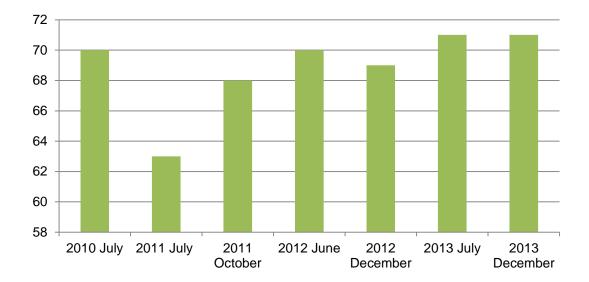

Graph 33 – Cycle hire scheme usage

The latest customer satisfaction score is higher than any since the scheme started. The different elements of the survey suggest increasing satisfaction with the use of members' keys and with the service from the contact centre.

However, scores for the availability of spaces at docking stations and value for money are at their lowest levels.

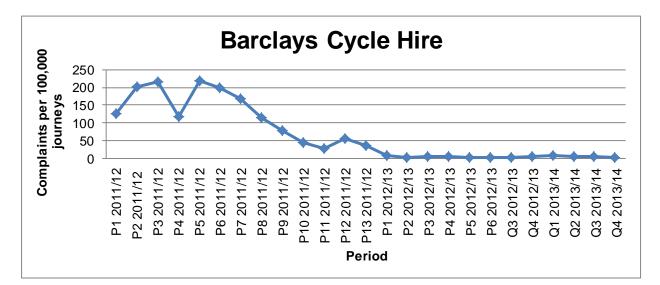

Graph 34 – July 2010, July 2011, October 2011, June 2012, December 2012, July 2013 and December 2013 cycle hire customer satisfaction score

Complaints decreased compared to the same period last year. The cycle hire scheme received 2.95 complaints per 100,000 journeys.

Graph 35 – Customer complaints received by TfL for every 100,000 journeys

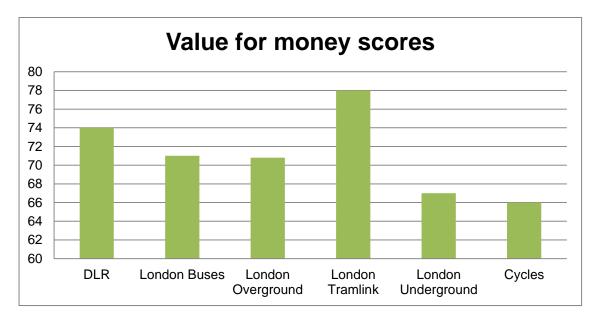

10 Customer satisfaction and value for money scores – modes comparison

Graph 36 – Q4 2013/14 overall customer satisfaction scores – modes comparison

* Annual survey only

** Taken from TfL's cycle hire customer satisfaction and usage report, February 2013

Graph 37 – Q4 2013/14 value for money scores - modes comparison

Appendix – Glossary & references
