

The voice of transport users

TfL 2013/14 Quarter 3 Performance Report

May 2014

London TravelWatch is the official body set up by Parliament to provide a voice for London's travelling public. We are funded by and accountable to the London Assembly.

Our role is to:

- Speak up for transport users in discussions with policy-makers and the media,
- Consult with the transport industry, its regulators and funders on matters affecting users,
- Investigate complaints users have been unable to resolve with service providers,
- Monitor trends in service quality.

Our aim is to press in all that we do for a better travel experience for all those living, working or visiting London and its surrounding region.

Table of issue dates for London TravelWatch's Transport for London (TfL) Performance Reports

TfL financial periods	Issue dates for London TravelWatch report for the corresponding quarter
Quarter 1 – Apr to Jun 2012	30 October 2012
Quarter 2 – Jul to Sept 2012	11 January 2013
Quarter 3 – Oct to Dec 2012	12 March 2013
Quarter 4 – Jan to Mar 2013	23 July 2013
Quarter 1 – Apr to Jun 2013	15 October 2013
Quarter 2 – Jul to Sept 2013	25 February 2014
Quarter 3 – Oct to Dec 2014	19 May 2014

7 London Overground	32
8 Dial-a-Ride	34
9 Cycle hire	36
10 Customer satisfaction and value for money scores – modes comparison	38
Appendix – Glossary & references	39

Where appropriate, for each performance graph, arrows have been included to show the direction of positive and negative performance trends.

London TravelWatch would like to acknowledge TfL's help and assistance in producing this report by supplying performance data and operational commentaries to accompany the performance statistics.

Executive summary

This report summarises the performance of all the Transport for London (TfL) modes of transport for the third quarter of the 2013/14 financial year (October to December 2013).

The aim of the report is to provide, in one place, information about the performance of TfL's transport network from the perspective of users. For this reason, London TravelWatch has selected performance information on each of the modes that it believes reflects the experience of the user. The information has been gathered from a number of sources to provide an overview of TfL's performance (see the appendix for source references).

We have previously judged performance against TfL's business plan targets. However, in this report we have taken a wider view on the performance of the various modes, more from a consumer perspective.

Overall the main TfL passenger modes are delivering well against their own targets and customer satisfaction is high. However, we remain concerned about the performance of London Streets and indications of rising traffic levels, which may well lead to increased congestion in the future. This will in turn impact on bus services. TfL need to develop a substantive response to rising population and employment levels that lead to increasing traffic levels on London's roads.

London Streets

TfL are managing their network better in terms of interventions to manage planned and unplanned events, computer controlled signals and works to improve the through-flow of junctions etc. Journey Time Reliability (JTR) was however below target this quarter.

However, there may be an indication of a reversal in the long term trend of reducing traffic volume which, if it continues, may mean increased congestion levels and the problems this will bring in the future. There needs to be a substantive policy response to increasing congestion on London's streets, particularly along bus routes.

Given the focus there has been on cycling it is disappointing that the cycle target is not being met as this is an integral part of the Mayor's Transport Strategy and needs to be met.

Whilst it is noted that TfL's carriageway condition target is met, London TravelWatch would want to see improvements in this area as the condition of the carriageway affects the journey experience of all the users of London's roads.

London Buses

The reliability of London's bus services and customer satisfaction scores are again good. TfL and the boroughs continue to increase the number of fully accessible bus stops in response to London TravelWatch campaigning over the last few years. This is very welcome.

The growth in demand and rising levels of congestion may well impact on reliability in the future and this along with journey time need constant monitoring. We look forward to the development of a measure of journey speed using the I bus system.

It remains a concern of London TravelWatch that not enough is being done to deliver bus priority on the streets used by London's bus services. Indeed some bus priority continues to be lost to cycle, town centre and other schemes. Where such losses occur there should be complimentary improvement to bus priority elsewhere.

London Underground

The performance of the Underground network better than the TfL business plan target. Customer satisfaction scores are above target.

However, it is noted that the customer satisfaction train service score is somewhat lower both for this quarter. TfL believe this poorer train service performance is attributable to disruption in period 9 leading to train service delays. There is additional dissatisfaction with crowding levels associated with increased demand.

Docklands Light Railway

Performance and customer satisfactions scores are high.

Customer complaints, (mostly about ticket machines) have decreased compared to previous quarters to be about average for the DLR.

London Tramlink

Performance and customer satisfaction are high. Value for money is below the last quarter and the same quarter in the previous year.

London Overground

London Overground is continuing to perform well, though the level of Right Time Arrivals (RTAs) is poorer than previous quarters. Customer complaints are up, attributed to extreme weather conditions in October.

Crowding on some sections of the London Overground is a regular occurrence. TfL are responding to this with additional carriages in the future.

Dial-a-Ride

Dial-a-ride continues to deliver its budgeted number of journeys.

Customer satisfaction overall remains at target, but this masks the issue of dissatisfaction of users with the ad-hoc journey booking service.

Cycle hire

The latest customer satisfaction score is higher than any since the scheme started. The different elements of the survey suggest increasing satisfaction with the use of members' keys and with the service from the contact centre.

However, the availability of spaces at docking stations and value for money were at their lowest levels.

1 Travel in London

TfL's annual '*Travel in London*' report records the way Londoners travelled in 2012/13. This report was published in January 2014¹.

There were 25.9 million daily trips in, to, and from, Greater London, an increase of 1.5% over the previous year. This is detailed in Table 1.

Table 1: How Londoners travel (millions of trips and percentage of all trips), 2012

Mode	No. of trips (millions) 2011	No. of trips (millions) 2012	Percentage of total 2012	Percentage change
Rail	2.4	2.6	10	8.3
Underground/DLR	2.2	2.4	9.2	9.1
Bus/Tram	4.1	4.1	15.8	0
Taxi/PHV	0.3	0.3	1.1	0
Car (driver & passenger)	9.6	9.6	37.0	0
Motorcycle	0.2	0.2	0.7	0
Cycle	0.5	0.5	1.9	0
Walk	6.2	6.3	24.3	1.6
All modes	25.5	25.9		1.6

¹ Travel in London, Report 6, Table 2.2

2 London Streets

This section of the TfL Performance Report focuses on the performance of the Transport for London road network (TLRN) also known as the Red Routes, which are the major arterial roads operated by TfL.

Journey Time Reliability (JTR) is a new measure of the performance of the road network. Although there are over four years of data for this measure, caution is still needed in drawing conclusions about the trend of JTR on the TLRN. The JTR measure is defined as the proportion of traffic which - for a 'typical' 30-minute journey - takes less than 35 minutes (a representative average London journey time of 30 minutes plus a five-minute 'allowance').

TfL has included projections for this indicator in the 2011/12 – 2014/15 Business Plan. The target figure is 90% for this financial year.

JTR is a measure of the congestion impacts on journeys. A major influence will be traffic volume, which as can be seen from graph 5 below, has fallen over the last few years, but has seen an increase in recent quarters. TfL have also undertaken much activity over the past few years to improve JTR, for example altering traffic signal timing, managing events and charging the utilities etc. for some street works.

The JTR across the whole of the TLRN in the AM peak for quarter 3 was 87.6%, which was below target for this quarter. This is 1.63 percentage points lower (worse) than the same period in 2012/13.

Graph 1a - Journey Time Reliability on the TLRN in the AM peak by quarter, Q1 2009/10 to Q3 2013/14

The same statistics of graph 1 are represented as a line graph in graph 1b. Please note there is no figure for the quarter 2 2012/13.

Graph 1b - Journey Time Reliability on the TLRN in the AM peak since Q1 2009/10

An equivalent JTR figure for the central area is also reported by TfL. This quarter's figure is 86.5%; this is 0.95 percentage points lower (worse) than the same period in 2012/13.

Graph 2 - Journey Time Reliability in central London in the AM peak by quarter, Q1 2009/10 to Q3 2013/14

Serious and severe disruption on the TLRN rose in quarter 3 compared to the same quarter last year.

Graph 3 - Duration of TLRN serious & severe unplanned and planned events (hrs) by quarter, Q1 2010/11 to Q3 2013/14

The average traffic speed on London's major roads in quarter 3 during weekdays decreased compared with the same quarter last year.

Graph 4 - Traffic speeds on London's major roads, 12 hrs average weekday between 0700-1900 by quarter (mph), Q1 2009/10 to Q3 2013/14

Traffic volumes across London have been generally falling. However, they are higher than the previous two quarters in 2012/13. This may be a reversal of a long term trend.

Graph 5 – Quarterly traffic volume on London major roads, 24hrs average weekday, indexed period 13 2006/07 = 100

Cycle flows in quarter 3 have increased compared to the same quarter in the previous year. Minor corrections have been made to the TLRN cycling index methodology to ensure it accurately reflects recent cycle flows.

Graph 6 – Cycle flows on the TLRN – by quarter indexed to March 2000 = 100. Q1 2008/09 to Q3 2013/14

Graph 7 shows the number of road works on the TLRN since quarter 1 2009/10. This shows that the number of road works have been contained below TfL's target maximum.

Graph 7 - Number of road works on the TLRN, Q 1 2009/10 to Q3 2013/14

The percentage of roads not in a 'good state of repair' is significantly above the target (poorer) than a previous business plan target. This target has been relaxed in the latest business plan, and is now being met. TfL tell us this is a sustainable target. There has been an improvement in the condition of the TLRN pavements this year.

[Note: the green and purple lines show the percentage of carriageway and pavement that is assessed as in need of repair. The blue and red lines show business plan projections.]

This is an annual survey reported at the end of the financial year.

Graph 8 – Condition of the TLRN carriageway and pavements since 2005/06 (percentage of carriageway/pavement in need of repair)

Since 2010, TfL have been conducting an online customer satisfaction survey amongst users of the TLRN. They repeated this survey in 2012. Below is a selection of the results. Though some caution should be applied to interpretation of this new survey, this year's figures show a marked improvement in customer satisfaction with the TLRN.

Table 2 – Customer satisfaction – traffic scores

Indicator	2010	2011	2012
Overall satisfaction	72	75	76
Working condition of traffic lights	75	77	78
Could accurately estimate how long journey would take	70	73	75
Up to the minute information about delays and disruption	68	72	73
Management of road works	67	70	73
Traffic congestion	63	67	69

Table 3 – Customer satisfaction – roads scores

Indicator	2010	2011	2012
-----------	------	------	------

Overall satisfaction	72	75	76
Street lighting	75	77	77
Condition of road surfaces	68	70	73

Table 4 shows a summary of all of the 2013/14 TfL business plan targets for streets that do not relate to safety.

Table 4 – Q3 2013/14 London Streets TfL business plan key performance Indicator (KPI)

KPI	Target 2013/14	Current performance level
Journey Time Reliability (seasonal target)	89.2	87.6
TLRN cycling journeys (seasonal target)	306	303
% of road assets not in good repair (annual figure for 2009/2010)	10%*	10%
Traffic signal availability	99.1%	99.3%
Street lights operating	97%	98.5%
<p>*Target reduced to reflect deterioration in road condition and an acceptance that the previous target is unachievable.</p> <p>London TravelWatch's overall performance assessment of TfL Streets:</p> <p>TfL are managing their network better in terms of interventions to manage planned and unplanned events, computer controlled signals and works to improve the through-flow of junctions etc. JTR was however below target this quarter.</p> <p>There may be an indication of a reversal in the long term trend of reducing traffic volume which, if it continues, may mean increased congestion levels and the problems this will bring in the future. There needs to be a substantive policy response to increasing congestion on London's streets, particularly along bus routes.</p> <p>Given the focus there has been on cycling it is disappointing that the cycle target is not being met as this is an integral part of the Mayor's Transport Strategy and needs to be met.</p> <p>Whilst it is noted that TfL's carriageway condition target is met, London TravelWatch would want to see improvements in this area as the condition of the carriageway affects the journey experience of all the users of London's roads.</p>		

3 London Buses

This section of the report outlines the performance of the London bus network in the third quarter of 2013/14.

Overall bus network performance

For the overall bus network, the two most significant measures of bus performance which reflect passengers' experience are Excess Wait Time (EWT) and the percentage of scheduled kilometres operated. Between them, they show whether the planned frequency of bus services are being achieved.

EWT is the measure that indicates the additional minutes wait time for passengers beyond the scheduled value on high frequency bus routes. EWT was 1.2, which was in line with the target for this quarter. See Graph 9.

Graph 9 – Q1 2008/09- Q3 2013/14, Excess Wait Time (minutes) on high frequency bus routes

Graph 10 represents the historical trend of the percentage of scheduled bus kilometres operated. This measure of performance is on target this quarter. Again, the graph shows seasonal targets.

Graph 10 – Q1 2008/09- Q3 2013/14, Percentage of scheduled bus kilometres operated

Focus on poor performing routes

As well as the EWT figure for all of London's high frequency bus services, TfL publishes figures for each route along with the minimum standard agreed with the operator as part of the contract.

Of London's 378 high frequency bus routes in quarter 3 2013/14, 129 were below the contracted minimum standard, 63 operated at the contracted standard, and 186 performed better than the contracted standard.

Poor performance on the bus network is often because of prolonged road works, which are outside of the control of TfL. When poor performances occur, TfL actively tries to reduce the impact on passengers.

London TravelWatch has analysed the worst performing 17 bus services in this quarter, to see if any are consistently poorly performing routes. Of these, bus routes 205 and 425 are of concern. London TravelWatch has asked TfL what the issues are for these routes and will continue to monitor them.

TfL informed London TravelWatch that:

'Route 205 has continued to be affected by a large number of Crossrail schemes (Paddington, Liverpool Street and Bow in particular) as well as other major schemes such as Euston Circus and Whitechapel Road. Performance during Q3 was particularly affected with all of the above schemes in progress, however since mid-December, the service has improved significantly and going forward into Q4 the route is around its minimum performance standard of 1.10 minutes with traffic lost mileage also reducing. This has been in part due to the completion of the Euston Circus scheme, where a contra-flow bus lane has now opened, thus reducing running time, and the reopening of Eastbourne Terrace at Paddington. '

'Stagecoach were awarded a new contract for this route which begins at the end of August and this will include further reliability measures. New hybrid buses will also be introduced, and these will be introduced on the existing contract during the next few weeks.'

'Route 425 unsatisfactory performance in Q3 is attributable to works in Stratford High Street. The route performed well prior to and after these works although the bus lane on this section is permanently lost. The target will have been set at the start of the new contract in July 2013.'

Bus stop accessibility

Based on TfL's audit of bus stops, 72.8% of all bus stops across the network meet TfL's exacting accessibility criteria. On the TfL road network, the figure is higher at 86.5%. This is a significant improvement and above TfL's Business Plan target.

Graph 11 shows the accessibility on the TLRN and on borough roads along with targets for bus stop accessibility. The blue line represents the Mayor's new target to 2016. The red line (a lower target) is from the 2009/10 to 2017/18 Business Plan. The new target set by the Mayor is very welcome, but will be challenging to achieve in a relatively short timeframe.

Graph 11 – Bus stop accessibility 2008/9 to 2017/18 target and progress to date

Customer Service

Customer satisfaction figures for the last two quarters, along with the comparison from one year ago, are shown in Graph 12.

Graph 12 –Q3 2012/13, Q2 2013/14 and Q3 2013/14 bus customer satisfaction scores

Graph 13 shows the overall customer satisfaction scores since Q1 2010/11.

Graph 13 – Overall satisfaction since Q1 2010/11 to Q3 2013/14

TfL reports quarterly figures for the number of complaints they receive per 100,000 journeys. These are available for all modes, except streets. London Buses have maintained a consistent level of performance, receiving only 2.70 complaints per 100,000 journeys in quarter 3.

Graph 14 – Customer complaints received by TfL for every 100,000 journeys

Table 5 shows a summary of the 2013/14 TfL Business Plan targets for London Buses.

Table 5 – Q3 2013/14 London Buses business plan key performance indicator (KPI)

KPI	Target 2013/14	Current performance level
Customer satisfaction – overall	82	83
Excess wait time – high frequency routes	1.2 minute	1.2 minute
% of scheduled services operated	97.1%	97.1%
<p>London TravelWatch's overall performance assessment of London Buses:</p> <p>The reliability of London's bus services and customer satisfaction scores are again good. TfL and the boroughs continue to increase the number of fully accessible bus stops in response to London TravelWatch campaigning over the last few years. This is very welcome.</p> <p>The growth in demand and rising levels of congestion may well impact on reliability in the future and this along with journey time need constant monitoring. We look forward to the development of a measure of journey speed using the I bus system.</p> <p>It remains a concern of London TravelWatch that not enough is being done to deliver bus priority on the streets used by London's bus services. Indeed some bus priority continues to be lost to cycle, town centre and other schemes. Where such losses occur there should be complimentary improvement to bus priority elsewhere.</p>		

4 London Underground

In this section, the performance of London Underground for the third quarter of the financial year 2013/14 is presented. The key indicators focused on are those for which targets are set in the TfL business plan and those which reflect the experience of London Underground's passengers.

Excess Journey Time (EJT) measures the number of additional minutes added to a total journey because of delays. Graph 15 presents the EJT for each line on the Underground network over the last three periods making up (broadly) the quarter.

Graph 15 – P7 2013/14 to P9 2013/14, Excess Journey Time by Underground line (minutes)

The network measure, shown in Graph 16, is a better estimate of EJT, as it is weighted by the passenger numbers using the different lines and recognises that 40% of Underground journeys will include two legs and therefore includes two wait times.

London Underground performed better than the network target set in the TfL 2013/14 business plan. It should be noted that this network target is somewhat tighter than the previous year's target and will tighten further in future years. While there are high profile disruption events on the Underground, performance is on an improving trend.

Graph 16 – P4 2011/12 to P9 2013/14, Excess Journey Time measure for the network (minutes)

TfL 2013/14 Quarter 3
Performance Report

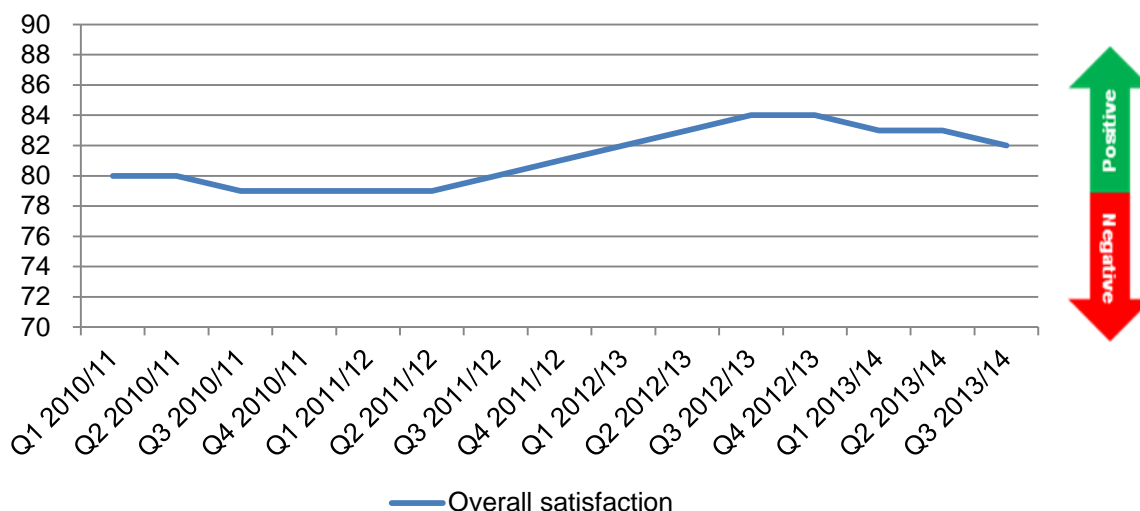

Customer satisfaction figures for the last two quarters, along with the comparison from one year ago, are shown in the Graph 17. The deterioration in 'train service' score is notable.

Graph 17 – Q3 2012/13, Q2 2013/14 and Q3 2013/14 London Underground customer satisfaction scores

Graph 18 shows the overall satisfaction score with London Underground services since Q1 2010/11.

Graph 18 – Overall satisfaction, Q1 2010/11 to Q3 2013/14

London Underground recorded the lowest complaints score out of all TfL modes, receiving only 1.14 complaints per 100,000 journeys in quarter 3.

Graph 19 – Customer complaints received by the Underground for every 100,000 journeys

Table 6 shows a summary of all of the 2013/14 TfL business plan targets for London Underground.

Table 6 – Q3 2013/14 London Underground TfL business plan key performance indicator (KPI)

KPI	Target 2013/14	Current performance level
Customer satisfaction score – overall	81	82
Excess Journey Time	5.88 minutes	5.77 minutes
% of scheduled services operated	97.2%	97.6%
<p>London TravelWatch's overall performance assessment of London Underground:</p> <p>The performance of the Underground network better than the TfL business plan target. Customer satisfaction scores are above target.</p> <p>However, it is noted that the customer satisfaction train service score is somewhat lower both for this quarter. TfL believe this poorer train service performance is attributable to disruption in period 9 leading to train service delays. There is additional dissatisfaction with crowding levels associated with increased demand.</p>		

5 Docklands Light Railway

In this section, the performance of DLR is presented. The key indicators focused on are those for which targets are set in the TfL business plan and those which reflect the experience of passengers of the DLR.

Graph 20 shows the journey time performance by route.

Graph 20 – Q3 2012/13, Q2 2013/14, Q3 2013/14 journey time (split by route)

*Please note DLR use calendar year quarters when they publish figures on their website. These are financial year quarters in line with TfL general reporting.

DLR's network-wide performance measure is 'departure reliability'. This is the percentage of intervals between trains at terminal stations no more than three minutes greater than the published service intervals.

Graph 21 – Q1 2010/11 to Q3 2013/14 reliability (departure within 3 minutes of published service intervals)

Graph 22 – Q3 2012/13, Q2 2012/13, Q3 2013/14 DLR customer satisfaction scores

Graph 23 – Q1 2010/11 to Q3 2013/14 DLR overall customer satisfaction scores

Customer satisfaction scores were omitted in quarter 2 2012/13, due to the staging of the London Olympic Games.

Graph 24 – Customer complaints received by TfL for every 100,000 journeys

Complaints decreased compared to the same period last year (Q3 2012/13). 2.36 complaints were received per 100,000 journeys. Complaints were mainly about Ticket Vending Machines (TVM).

Table 7 – Q3 2013/14 DLR TfL business plan key performance Indicator (KPI)

KPI	Target 2013/14	Current performance level
Customer satisfaction score – overall	82	86
On-time performance	97%	99.0%
% of scheduled services operated	98%	98.9%
<p>London TravelWatch's overall performance assessment of Docklands Light Railway:</p> <p>Performance and customer satisfactions scores are high.</p> <p>Customer complaints, (mostly about ticket machines) have decreased compared to previous quarters to be about average for the DLR.</p>		

6 London Tramlink

The percentage of scheduled services operated by Tramlink was the same as the previous quarter, and was above the business plan target.

Graph 25 – Q3 2008/9 to Q3 2013/14, percentage of scheduled service kms operated

London Tramlink reports a public performance measure, which is the percentage of trams that arrive within five minutes of the scheduled time. There is no associated target.

Graph 26 – Q1 2010/11 to Q3 2013/14, public performance measure (per cent)

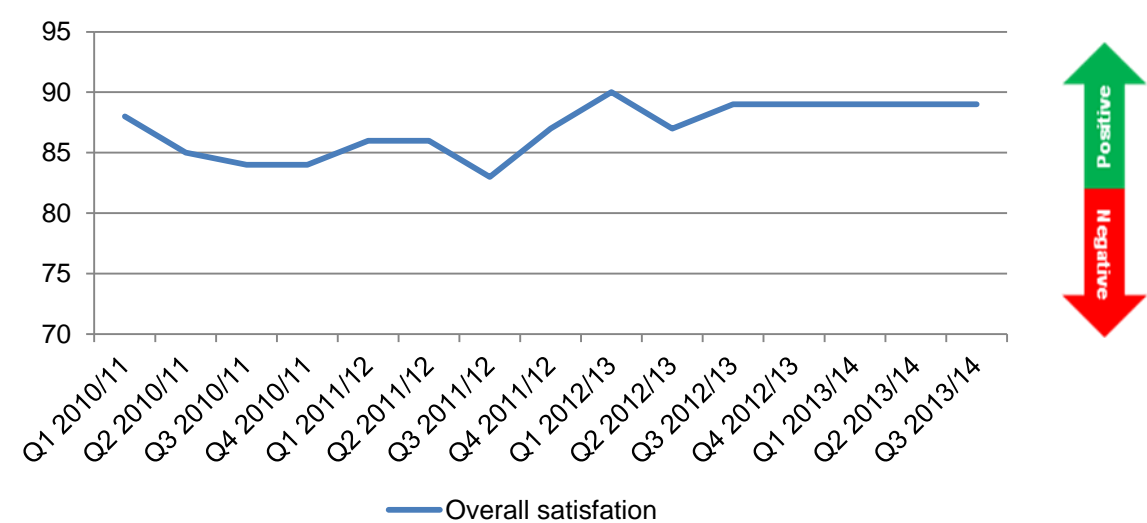

Customer satisfaction scores on Tramlink are shown in Graph 27 including a Tramlink value for money score.

Graph 27 – Q3 2012/13, Q2 2013/14, Q3 2013/14 customer satisfaction scores

Graph 28 – Overall customer satisfaction scores since Q1 2010/11

Tramlink received 0.95 complaints per 100,000 journeys. From Q3 2013/14, Tramlink complaints have been recategorised. Any previous contact was classed as complaints; this is now based on genuine complaints only. Issues of complaints were centred on overcrowding and rail replacement services.

Graph 29 – Customer complaints received by TfL for every 100,000 journeys

Table 8 shows a summary of all of the 2013/14 TfL Business Plan targets for London Tramlink.

Table 8 – Q3 2013/14 London Tramlink TfL business plan key performance Indicator (KPI)

KPI	Target 2013/14	Current performance level
Customer satisfaction score – overall	86	89
% of scheduled service kms operated	98%	98.8%
London TravelWatch's overall performance assessment of London Tramlink:		
Performance and customer satisfaction are high. Value for money is below the last quarter and the same quarter in the previous year.		

7 London Overground

London Overground's public performance measure (PPM) for the first quarter was 95%. This was 2.08 percentage points lower than the same quarter last year. Please note this is a Network Rail statistic.

The National Rail Passenger Survey results are from the autumn 2013 wave of surveys. Passenger satisfaction has significantly decreased since the last survey. The percentage of passengers satisfied was 89% compared with 93% in autumn 2012, and 82% in spring 2012.

TfL's own customer satisfaction score is above target.

Right time arrival

London TravelWatch members have asked that Right Time Arrival (RTA) be included in this report. RTA is an industry measure of the percentage of trains that arrive at their final destination either on time or early. Right time is defined as less than one minute late, and should not be confused with 'on time', as defined for Public Performance Measure (PPM) purposes.

London Overground performs well compared to most TOCs, however this month's RTA was poor compared to previous performance.

Graph 30 – London Overground percentage of RTA

London Overground experienced an increase in complaints compared to the previous quarter and quarter 3, 2012/13, receiving 3.03 complaints per 100,000 journeys. The increase in complaints is attributed to service performance caused by extreme weather conditions in October.

Graph 31 – Customer complaints received by TfL for every 100,000 journeys

Table 9 – Q3 2013/14 London Overground TfL business plan key performance Indicators (KPI) and National Rail performance figures

National Rail performance measure	Target 2013/14	Current performance level
Customer satisfaction – overall (National Passenger Survey bi-annual data). Percentage satisfied or good	Average of similar London and South East TOC's: 81% (Not a TfL target)	89% (Autumn 2013)
Public Performance Measure (Network Rail figures)	Average of London and south east TOCs is 91% (Not a TfL target)	95%
TfL KPIs	Target 2013/14	Current performance level
Overall customer satisfaction score (TfL measure)	80	80
On time performance (A TfL measure of PPM Moving Annual Average)	94.2%	96%
<p>London TravelWatch's overall performance assessment of London Overground:</p> <p>London Overground is continuing to perform well, though the RTA is poorer than previous quarters. Customer complaints are up, attributed to extreme weather conditions in October.</p> <p>Crowding on some sections of the London Overground is a regular occurrence. TfL are responding to this with additional carriages in the future.</p>		

8 Dial-a-Ride

Dial-a-Ride is a door-to-door transport service operated by TfL for people (members) with disabilities who cannot use buses, trains or the Underground in London.

Overall customer satisfaction was above target this quarter. Dial-a-Ride members are very satisfied with driver helpfulness/courtesy, which scores 96. Satisfaction with the booking process is higher than the same time last year and was higher than the previous quarter, with a score of 79, but below the target of 80.

The number of journeys delivered in quarter 3 is the same compared to the same quarter in the previous year. Though no quarterly target is available, TfL are forecasting that the number of journeys will meet their target for the year.

It is pleasing to see Dial-a-Ride is now generally delivering the target number of journeys and customer satisfaction is at target. However, greater demand may arise from an aging population and the cessation of other similar door-to-door services. TfL have implemented a new regime for membership, which should ensure that those that need this service are prioritised.

Complaints increased compared to the same period last year. Dial-a-Ride received 145 complaints per 100,000 journeys. Booking refusals are the main source of complaints.

Graph 32 – Customer complaints received by TfL for every 100,000 journeys

Table 10 – Q3 2013/14 Dial-a-Ride TfL business plan KPIs

KPI	Target 2013/14	Current performance level
Customer satisfaction score – overall	92	92
Quarterly passenger journey numbers	1,400,000(annual target)	327,647
<p>London TravelWatch's overall performance assessment of Dial-a-Ride:</p> <p>Dial-a-Ride continues to deliver its budgeted number of journeys.</p> <p>Customer satisfaction overall remains at target, but this masks the issue of dissatisfaction of users with the ad-hoc journey booking service.</p>		

9 Cycle hire

In this section, the performance of the cycle hire scheme is presented. London's cycle hire scheme is a public bike-sharing scheme for shorter journeys around the capital. The bikes are available to casual users, as well as London cycle hire scheme members.

The graph below shows the usage of the cycle hire scheme since August 2010, on a monthly basis. The number of cycle hires has fluctuated for a number of reasons since it started. Initially cycle hire was only available to members. Since then one-off hires were made possible and the availability of cycles has been increased as the scheme has rolled out to new areas. In January 2013, there was a sharp increase in the 'access' fee. Thus trends in usage are difficult to determine

Graph 33 – Cycle hire scheme usage

The latest customer satisfaction score is higher than any since the scheme started. The different elements of the survey suggest increasing satisfaction with the use of members' keys and with the service from the contact centre.

However, scores for the availability of spaces at docking stations and value for money are at their lowest levels.

Graph 34 – July 2010, July 2011, October 2011, June 2012, December 2012, and July 2013 cycle hire customer satisfaction score

Complaints increased compared to the same period last year. The cycle hire scheme received 4.85 complaints per 100,000 journeys.

Graph 35 – Customer complaints received by TfL for every 100,000 journeys
